Emotional Intelligence Proficiency in Students Enrolled in Professional Courses

Mr. Shailendra Singh Sainwal

Assistant Professor, Himalayan School of Management Studies, Swami Rama Himalayan University, Dehradun 248140. {Uttarakhand}

Abstract

Emotional Intelligence (EI) plays a vital role in both professional and personal success, with research indicating that 80% of a person's success is attributed to their EI, while only 20% depends on IQ. EI refers to the ability to recognize, understand, and manage emotions effectively, both in oneself and others. This study aims to assess the level of EI among undergraduate and postgraduate students in Dehradun. Data was gathered from 780 students across various institutes in Dehradun. The research is organized into eight sections: introduction, concept of EI, key variables, the importance of EI in success, types and attributes of EI, analysis and discussion of findings, conclusions, and suggestions for improvement. The study highlights the significance of emotional intelligence in shaping student success and offers insights into how educational institutions can foster this skill among students. By understanding the emotional dynamics, students can enhance their personal and professional growth, contributing to their overall well-being and achievement. The conclusions and suggestions from this research will help in developing strategies to nurture EI among students for better outcomes in their academic and future careers.

Keywords: Emotional intelligence, Professional students, IQ

Introduction

Emotional intelligence (EQ) is a set of skills or capabilities to recognize and manage their emotions, moods, and impulses effectively. It involves emotional control and use it appropriately as per the required circumstances. It's a practice to use best emotion as per the requirement of the time like empathy, discrimination, moods, stress, courtesy, consideration, and respect. EQ also to avoid negativity like self-doubt, low achievement and procrastination of given assignments.

A "good" personality is not a tool to get success in the life. Clear and sound judgement of circumstances and to use emotions as per that is also required. High EQ is required to manage impulses, effective communication, solve problems and to manage any change easily. These skills will be helpful to get success in their life ahead.

Review of literature

Emotional Intelligence (EI) is a crucial factor in professional and personal success, encompassing self-awareness, mood management and motivation. Emotions are essential for cognitive functioning and have been overlooked by cognitive psychologists. Goleman (1998), revealed that 4/5th persons get success because of their EI, while only 1/5th because of IQ. EI is not a superior trait, with men and women equally capable of increasing it.

Research Methodology

Objective:

This study is conducted to assess the EI of college students in Dehradun. Emotional intelligence is accessed on the basis of different parameters like self-awareness, self-regulation, motivation, empathy, and social skill.

Research Design

Descriptive research is being used for conducting this study with an intention to describe the state of affairs and questionnaire is being used to collect data.

Data collection

There are two sources through which data is collected.

Primary: Primary data is collected through Questionnaire.

ISSN: 1526-4726 Vol 4 Issue 2 (2024)

Secondary: Books, reports and websites were used as a source of secondary Data.

Data collection methods

Questionnaire: It is the most effective method of generating data. A detailed questionnaire comprising of 19 close ended questions covering several aspects of competency mapping in Alps Industry. The type of scaling which is used in the research is Likert's Summated Scaling because it increases the degree of internal consistency in the set of statement and also respondents find easy respond because they have wide range of answers to choose.

Sampling

The random sampling method is being used under this study for giving equal opportunity to each element of the population.

Sample Size: 780

Sample unit: U.G and P.G students

Sample area: Different Institutes of Dehradun.

DATA ANALYSIS AND INTERPRETATION

An attempt was made to classify the respondents on the basis of their education. For this they were categories as those pursuing Under Graduate courses and Post Graduate courses. The information thus receive is presented in the table 1.

Table 1. Education of respondents

| | | f | % |
|-------|----------------|-----|-------|
| Valid | Unger Graduate | 300 | 38.5 |
| | *Post Graduate | 480 | 61.5 |
| | Total | 780 | 100.0 |

Inference: The data presented in the above table 1 reveals that majority of the respondents are of doing post graduate courses, as it was indicated 61.5% respondent in the sample and remaining 31.5% respondents are of those doing under graduate courses. Analysis signifies that sample is dominated by those students who are doing post graduate courses.

An attempt was made to classify the respondents on the basis of action taken by them or factor influence most it while making important decisions. The information thus receive is presented in the table 2.

Table 2. Action taken in making important decisions by respondents

| | | f | % |
|-------|--------------------------------------|-----|-------|
| Valid | Follow my instinct. | 650 | 83.3 |
| | Rely on direction from other people. | 20 | 2.6 |
| | Go with the easiest option. | 80 | 10.3 |
| | Guess randomly. | 30 | 3.8 |
| | Total | 780 | 100.0 |

ISSN: 1526-4726 Vol 4 Issue 2 (2024)

The data presented in the table 2 and reveals that majority of the respondents are those who follow their instincts while making important decisions as it was indicated by 83.3% respondent in the sample. 10.3% of the respondents go with the easiest option, 3.8% guess randomly and remaining 2.6 rely on direction from other people. Analysis signifies that sample is dominated by a group of student who follow their instinct while making important decision.

An attempt was made to classify the respondents on the basis of statements best describes them in making friends. The information thus receive is presented in the table 3.

Table 3. Statements best describes you.

| | | f | % |
|-------|---|-----|-------|
| Valid | I am good in knowing and making new friends. | 220 | 28.2 |
| | I treat other in a good manner, but I make true friends only after knowing them deeply. | 490 | 62.8 |
| | I am not good in knowing and making new friends. | 70 | 9.0 |
| | Total | 780 | 100.0 |

An attempt was made to classify the respondents on the basis of their responses on habit of annoying by the classmates. For this they were ask to response on some possible alternatives. The information thus receive is presented in the table 4.

Table 4. Response on habit of annoying by classmates

| | | f | % |
|-------|--|-----|-------|
| Valid | Tell your friends what is bothering you. | 637 | 81.6 |
| | Make a complaint about the behavior to your other who is bullying you. | 41 | 5.3 |
| | Talk about your friends behind his back. | 20 | 2.6 |
| | Suffer in silence | 82 | 10.5 |
| | Total | 780 | 100.0 |

An attempt was made to classify the respondents on the basis of their responses on suddenly assigned another work. For this they were ask to response on some possible alternatives. The information thus receive is presented in the table 5.

ISSN: 1526-4726 Vol 4 Issue 2 (2024)

Table 5. Response on suddenly assigned another assignment

| | | f | % |
|-------|--|-----|-------|
| Valid | Anxious about getting all the assignments done. | 471 | 60.5 |
| | Overwhelmed by the assignments before you. | 20 | 2.6 |
| | Angry that your teachers didn't notice about your excessive load. | 248 | 31.6 |
| | Feel depressed and think that you are not capable to finish your all assignments on time. | 41 | 5.3 |
| | Total | 780 | 100.0 |

An attempt was made to classify the respondents on the basis of their reactions after teased by a classmate or teacher. The information thus receive is presented in the table 6.

Table 6. Reaction of respondents after teased by a classmate or teachers

| Valid | Never | 185 | 23.7 | 23.7 | 23.7 |
|-------|--------------|-----|-------|-------|-------|
| | Occasionally | 267 | 34.2 | 34.2 | 57.9 |
| | Sometimes | 328 | 42.1 | 42.1 | 100.0 |
| | Total | 780 | 100.0 | 100.0 | |

An attempt was made to classify the respondents on the basis of their attitude towards friends in difficulty. The information thus receive is presented in the table 7.

Table 7. Attitude of respondents towards friends in difficulty

| | | f | % |
|-------|---|-----|-------|
| Valid | Help them personally | 616 | 78.9 |
| | See if you can get someone to help them | 124 | 15.9 |
| | Let them work out their own problems. | 20 | 2.6 |
| | Report the issue to their supervisor. | 20 | 2.6 |
| | Total | 780 | 100.0 |

ISSN: 1526-4726 Vol 4 Issue 2 (2024)

An attempt was made to classify the respondents on the basis of their responses on negative rumor about individual by opponent. The information thus receive is presented in the table 8.

Table 8. Response on negative rumor about you by opponent

| | | f | % |
|-------|----------------------------------|-----|-------|
| Valid | Publicly neglect the rumor | 247 | 31.6 |
| | Start a rumor about the opponent | 20 | 2.6 |
| | Resolve to let it pass | 410 | 52.6 |
| | Get upset, but take no action. | 103 | 13.2 |
| | Total | 780 | 100.0 |

An attempt was made to classify the respondents on the basis of their responses on fight with classmates (verbally or physically). The information thus receive is presented in the table 9.

Table 9. Response on fight with you (verbally or physically)

| | | f | % |
|-------|-------------------|-----|-------|
| Valid | Ignore | 170 | 21.8 |
| | Try to Work Thing | 260 | 33.3 |
| | Fight Back | 350 | 44.9 |
| | Total | 780 | 100.0 |

The data reveals that majority ignore the situation as it was indicated 44.9% respondent in the sample. 33.3% respondent try to work thing out and remaining 21.8% believes in fight back. Analysis signifies that sample is dominated by those who believes in ignoring the situation when fight with you.

An attempt was made to classify the respondents on the basis of their most common emotion. The information thus receive is presented in the table 10.

Table 10. Your most common emotion

| | | f | % |
|-------|----------|-----|-------|
| Valid | Нарру | 555 | 71.1 |
| | Content | 102 | 13.1 |
| | Stressed | 123 | 15.8 |
| | Total | 780 | 100.0 |

ISSN: 1526-4726 Vol 4 Issue 2 (2024)

The data reveals that majority are those who have happy as a most common emotion as it was indicated 71.1% respondent in the sample. 15.8% respondent who have stressed and remaining 13.1% have content as their most common emotion. Analysis signifies that sample is dominated by those who have happy as their most common emotion.

An attempt was made to classify the respondents on the basis of their choice to work alone or with a group. The information thus receive is presented in the table 11.

Table 11. Choice to work alone or with a group or team

| | | f | % |
|-------|------------|-----|-------|
| Valid | Alone | 123 | 15.8 |
| | With Group | 657 | 84.2 |
| | Total | 780 | 100.0 |

The table 11 reveals that majority like to work with a group or team as it was indicated 84.2% respondent in the sample and remaining 15.8% who like to work alone. Analysis signifies that sample is dominated by those who like work with a group.

Factor analysis

Respondents were asked to respond on the different statements to access their EQ level. The exploratory factor analysis and the reliability analysis (Cronbach's Alpha test- α) were used and data extracted is stored in Table 12.

Table 12. Reliability Statistics

| α | N |

| I am good to control my anger when verbally attacked. | | | | | | .466 |
| I show my anger in certain situations or with specific people. | | | | | | .443 |

Extraction Method: Principal Component Analysis.

The study identifies seven factors that contribute to emotional intelligence in students. Self-awareness (E1), emotional resilience (E2), motivation (E3), interpersonal sensitivity (E4), influence (E5), intuitiveness (E6), and conscientiousness (E7) are the main components. Self-awareness refers to the ability to cope with stress and worry, while emotional resilience involves being comfortable with emotional love and expressing love in various ways. Motivation is the ability to cope with feelings of degradation and jealousy, while interpersonal sensitivity involves being comfortable with others' grief and anxiety. Influence is the ability to decide to love another person when threatened, while intuitiveness refers to feelings of guilt and sadness over past actions Some of the actions is tabulated in Table 13. Conscientiousness is the ability to release emotions and avoid anger in certain situations. Actions related to Conscientiousness is shown in Table 14.

Table 15. Mean of educational level of respondents

| Education level | E 1 | E2 | Е3 | E4 | E5 | Е6 | E7 |
|-----------------|------------|--------|--------|--------|--------|--------|--------|
| UG | 2.3250 | 2.7889 | 2.3167 | 2.8667 | 3.2333 | 3.3333 | 4.0444 |
| *PG | 2.6146 | 2.2639 | 2.4063 | 2.9236 | 3.6458 | 3.3333 | 3.3889 |
| Total | 2.5032 | 2.4658 | 2.3718 | 2.9017 | 3.4872 | 3.3333 | 3.6410 |

ISSN: 1526-4726 Vol 4 Issue 2 (2024)

As is evident from the rating, the students are doing P.G courses are more conscientiousness while students doing P.G courses less emotional resilience power which is listed in Table 15. Among all are variables of emotional intelligence the U.G students are less motivated. And intuitiveness among all U.G and P.G is almost same.

Table 16. ANOVA

| | | Sum Of Squares | Df | Mean Square | F | Sig. |
|----|----------------|-------------------|-----|-------------|--------|-------|
| E1 | Between Groups | 1.548 | 1 | 1.548 | 1.590 | .211 |
| | Within Groups | 74.014 | 778 | .974 | | |
| | Total | 75.562 | 779 | | | |
| E2 | Between Groups | 5.088 | 1 | 5.088 | 3.268 | .075 |
| | Within Groups | 118.320 | 778 | 1.557 | | |
| | Total | 123.409 | 779 | | | |
| E3 | Between Groups | .148 | 1 | .148 | .149 | .701 |
| | Within Groups | 75.570 | 778 | .994 | | |
| | Total | 75.718 | 779 | | | |
| E4 | Between Groups | .060 | 1 | .060 | .132 | .717 |
| | Within Groups | 34.409 | 778 | .453 | | |
| | Total | 34.469 | 779 | | | |
| E5 | Between Groups | 3.141 | 1 | 3.141 | 2.491 | .119 |
| | Within Groups | 95.846 | 778 | 1.261 | | |
| | Total | 98.987 | 779 | | | |
| E6 | Between Groups | .000 | 1 | .000 | .000 | 1.000 |
| | Within Groups | 71.333 | 778 | .939 | | |
| | Total | 71.333 | 779 | | | |
| E7 | Between Groups | 7.934 | 1 | 7.934 | 13.982 | .000 |
| | Within Groups | 43.126 | 778 | .567 | | |
| | Total | 51.060 | 779 | | | |

As it is evident from the table 16 that calculated value of F > tabulated value (F=2.37) AT 5 % level of significance in Emotional Resilience, Influence and **Conscientiousness.** So, null hypothesis is rejected indicating that there is significance different in the different variables of the emotional intelligence across the different level of education of students. On the similar pattern it can be seen that calculated value of F is less than the tabulated value (F=2.37) AT 5 % level of significance in self- awareness, motivation, interpersonal sensitivity. Hence null hypothesis is accepted indicating there is no significance difference in the in the different emotional intelligence factor across the different level of education of students i.e., U.G and P.G students at Dehradun.

Anova analysis of various mean with gender categories was done with the assumption that there is no significant difference on the means on the different emotional intelligence factor among the students of different gender categories. Since calculated value is greater than tabulated (Table 18) value of mean of variable like **Resilience**, **Inter Personal Sensitivity**, **Intuitiveness**, **Consciousness**, hence null hypothesis (H0) is rejected. There is no significant difference on the means on the different emotional intelligence factor among the students of different gender categories However null hypothesis is accepted in case of variable like **Self Awareness**, **Motivation**, **Influence** indicting that there is no significant difference of these factor across students of different gender categories.

Conclusion

The current study on Emotional Intelligence was done on a total sample of 78 male and female students doing professional courses in the different institute of Dehradun area. Established questionnaire was used. The mean scores on all the five components indicate a lead in the males over the females. The analysis reflects that there is no significance difference in the in the different emotional intelligence factor across the different level of education of students i.e., U.G and P.G students at Dehradun. However, when it was cross checked across the gender categories it was found that the mean difference between male and female is statistically significant with respect to Resilience, Inter Personal Sensitivity, Intuitiveness, Consciousness. The future of this war torn; conservative society is dependent on the efficacy of these students who are in the final career level of education possible in the country. The 'average' level of emotional competency indicates that these students lack emotional competency essential for making their career personally successful and socially meaningful.
